

TRANTEX MODEL 360QMII

THERMOPLASTIC MELTER/APPLICATOR

*Reduce melt times and
double production*

Introducing Trantex's latest product, the **ALL-NEW 360QMII**. The **360QMII** is the Quick Melt version of the 360MII applicator with greatly reduced melt times yet maintains the same great portability. The **360QMII** is best used by customers looking for increased production without the additional investment of an external premelter. Trantex has identified this growing market segment requiring enhanced production with a more affordable upfront investment. The **360QMII** can double and even triple production rates. Get 2-3 times the production gains with only a moderate increase in price. The **360QMII** represents a great value and investment.

The **360QMII** also fills an efficiency need with the largest thermoplastic contractors. For those countless smaller jobs that require melting and applying 1-30 bags per day, the **360QMII** becomes a very economical solution that handles these quickly while not tying up the more expensive premelter trucks or trailers. With the **360QMII**, smaller crews handle these jobs to lower jobsite costs. This allows the larger thermoplastic equipment to handle the higher volume jobs they were designed for.

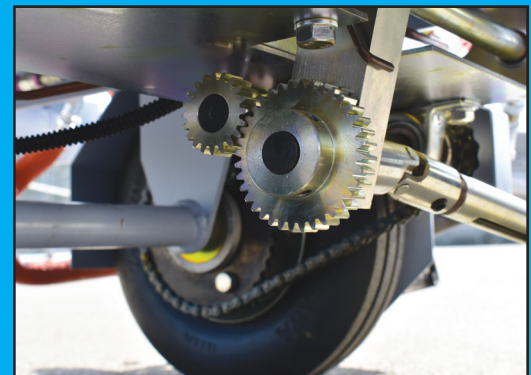

(continued on the back)

*Industry leading steel dies are thicker
and substantially heavier*

Melt & Apply Up To:				
Bags/Day	10	20	40	180
360MII		12.5		
360QMII			30	
360MII/T720				180

*Production per day - melt and apply
comparison between equipment*

*Positive direct-drive bead dispense
(no frictional wheels)*

TRANTEX MODEL 360QMII

THERMOPLASTIC MELTER/APPLICATOR

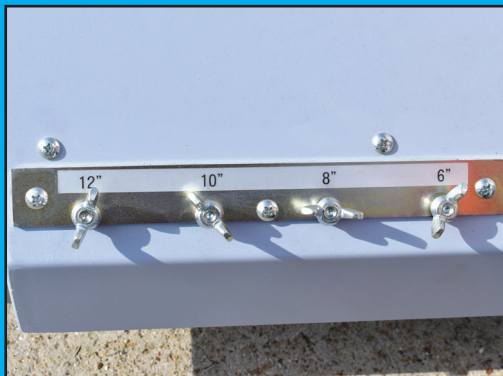

All the great features, comfort levels, and incredible maneuverability of the 360MII is retained on every **360QMII**. So, as your thermoplastic business grows, the **360QMII** seamlessly transitions from the melter/applicator to working in tandem with a higher output external premelter to now productively apply hundreds of bags per day.

360QMII Unique Features:

- 14" auger system. This auger is 40% larger and really compliments the **360QMII's** new burner system. More intense heat requires more effective agitation and this auger delivers. It ensures uniform material temperatures throughout the material column. This further improves line quality and consistency.
- New "system matched" HO burner system. The **360QMII's** burner delivers over twice the BTU's and distributes it over a greater area for more even heat transfer and quicker melt times.
- Streamline, proven design chassis: the **360QMII** is based on the 360MII therefore retains all the advantageous features and benefits.
- The industry's most versatile tank offering: Choose 360 lb. tanks or 265 lb. tanks based on your needs.
- Tanks are removable and interchangeable for same machine color change.
- Industry exclusive direct drive bead dispense: Beads are mechanically and positively engaged so bead reflectance numbers are more easily met.

Melts and applies up to 30 bags per day

- Better line quality in every way due to more accurately held temperatures.
- Surprisingly fast melt times of 2-3 times faster
- Less standing around...waiting
- Automatic temperature control standard
- Reduces cost per foot of applied

Intuitive bead dispenser quickly adjusts from 4\", 6\", 8\", 10\", 12\" and dual 4\" widths

Operator located die burner controls.
